

July 2022

New

- Ping Identity SSO. Added SAML support for Ping Identity single sign-on.
- Reinstatement of Suspended Users From the CLI. Added the CLI command `sdm admin users reinstate`, which reinstates suspended users.

Updated

- Updated Text on Users Page. Improved the user experience when the Admin UI Users page is loading.
- Updated UX on Users Page. Added an improved indicator for when tables load data in the Admin UI.
- Secret Store Disabling Validation. Included an additional validation related to disabling secret stores.
- Resources Search Results Display. Improved the formatting of query results in the Admin UI.
- Updated Clusters Form. Improved the UX design of the Add cluster form in the Admin UI.
- Additional Non-StrongDM Secret Store Validation. Added client-side validation in the Admin UI to require secret store information when the Enforce non-StrongDM secret store setting is enabled.
- Admin UI Login. Made minor UX updates to the authentication page that allows access to the Admin UI.
- Improved Download Page. Redesigned the Admin UI's Download & Install page for a better user experience.
- Detailed Error Logs for Gateway/Relay Misconfiguration. Added more error logs for when a gateway or relay has local logging configured incorrectly.

Fixed

- Port Selection Correction. Fixed a bug where a Snowflake datasource (created via Terraform) selected the incorrect ports for gateway-to-resource connections.
- Failed Trial Account Creation. Fixed a bug that caused certain trial accounts not to be created.
- API Signature Header Vulnerability. Security updates in the API.
- Cloud Connection Command Issue. Fixed a bug where `sdm connect -all` would error if already connected to a cloud resource.
- Resources Displaying as Disconnected. Fixed a bug where `sdm ready myResource` would present that a resource was not connected even if it had been connected prior to the `sdm ready` command being entered.
- EKS CA-Handling Issue. Fixed a bug with Certificate Authority handling that caused a UX bug in the Admin UI for EKS clusters.

- Duplicate Cluster Names. Fixed a bug that allowed the entry of duplicate cluster names in the Admin UI.
- Successful Response Code for Incorrect Credential. Fixed a bug in the SCIM API where HTTP response code “200” would be returned instead of “401” when attempting to use a StrongDM “Admin Token” as an “Authorization: Bearer” token.
- No Indication That Resource is Already Connected. Fixed a bug that caused `sdm connect -v` not to print when already connected to the target resource.
